					FS-6700-7 (11/99)
U.S. Department of Agriculture		1. WORK PROJECT/ACTIVITY		2. LOCATION	3. UNIT
US Forest Service		Volunteer Trail Maintenance & Field Work		National Forests in North Carolina & Cherokee National Forest	NFsNC: Appalachian RD, Grandfather RD, Pisgah RD, Nantahala RD CNF: Watauga RD & Unaka RD
JOB HAZARD ANALYSIS	(JHA)	4. NAME OF ANALYST		5. JOB TITLE	6. DATE PREPARED
References-FSH 6709.11 and -12 (Instructions on Reverse)		Drew Ford		Forest Safety Officer	09/07/2021
7. TASKS/PROCEDURES	8. HAZARDS		9. ABATEMENT ACTIONS Engineering Controls * Substitution * Administrative Controls * PPE		
Driving to the Jobsite	Dusty, winding, narrow roads Rocky or one-lane roads Turning around on narrow roads		 Employee should drive confidently and defensively at all times Drive with headlights on at all times Go slow around corners and over rocks Stay clear of gullies and trenches Yield right-of-way to oncoming vehicles- find a safe place to pull over Safely turn out with as much room as possible. Know what is ahead and behind the vehicle. Use a backer when one is available. 		
Communication	Safety Crew Unity		- Talk to each other - Let other crew members know when you see a hazard - Avoid working near known hazards - Yell "ROCK" if you see one start to roll down hill - Always know the locationof fellow crewmembers - Supervisors of crew leads will carry a radio and spare batteries. Be familiar with the communication plan and know your assigned frequency - Utilize the check in-check out policy		
Walking and working in the field	Falling down Twisted ankels and knees Poor footing Damamge to eyes		Always watch your footing. Slow down and use caution around logs, rocks and animial holes. Extremely steep slopes (>50%) can be hazardous under wet or dry conditions; consider and alternate route. Tree root holes are prevalent and should be flagged. Work boots, hiking boots, or sturdy shoes will be required. Open toe shoes and the like are prohibited. Watch where you walk, especially around trees and brush with limbs sticking out. Exercise caution when clearing limbs. Advise wearing eye protections. Ultraviolet light from the sun can be damaging to the eyes; look for sunglasses that specify significant protection from UV-A and UV-B radiation.		
				the responsibility to: are not modified or used in a	any manner that increases the

		riols of injury
	To also and Equipment	risk of injury.
	Tools and Equipment	- Ensure that tools remain in a safe condition through periodic inspection and
		repair. This includes tools furnished by volunteers
		- Monitor Empoyees performance periodically to ensure proper methods are
		followed
		- Gloves shall be worn while performing work tasks
Use of Hand Tools	Injuries	- Wear hardhat, gloves, shin guards and safety glasses.
		- Maintain a working distance of atleast 10 feet between crew members
		- Place tools and equipment, not in the operation, a safe distance from the
		work area
		- Training in proper use and selection of tools for the job should be provided to
		each volunteer
		- Tailgate safety sessions are recommended.
Working during Hunting	Injuries	- Wear Hunter Orange Vest.
Season	Death	- Avoid times and areas of poor visibility.
Pre Use Inspection of	Missing or Loose	- Before running equipment, check for missing, worn and loose parts
Equipment	parts	- Ensure guards are attached
(Power Equipment)	Lack of training	- Consult operator manual for instructions
(Power Equipment)	Lack of training	
		- Inspect fuel lines and fuel tank
		- Do not repair unit without proper instructions
		- Follow manufacturers maintenance and servicing guidelines
		- Adjust handle and strap for comfort and balance
		- If unit is unsafe, tag it "out of service" in a position that will be immediately
		obvious to anyone attempting to operate.
		- Read the operator's manual
Operator	Lack of Training	- Locate the safety decals on your unit. Make sure the decals are legible and
Operator	Luck of Training	that you understand and follow the instructions on them.
		- You should be in good mental and physical health before operating power
		equipment.
		equipment.
		- Wear safety glasses or goggles that meat ANSI standard Z87.1 compliance
D DDC	Electron Objects	- Faceshild may be worn only if safety glasses are worn underneath
Proper PPE	Flying Objects	- Wear ear plugs of hearing protection headsets
	Dust, glass, rocks,	- Gloves must be worn
	cans and wood	- Long sleeve shirts and long pants are required
	Hearing Loss	- Non-skid boots are required
	Insect stings/Bites	- Dust masks may be worn
	Snake Bites	
		- Start only with harness securely attached
Starting		- Always start unit on the ground
	Injuries	- Shutdown immediately if the unit starts to shake or vibrate

		-
Fueling	Burns Fire Spills	 Allow engine to cool for atleast 5 minutes before refueling Fill on bare ground only Wipe and spilled fuel from the unit and move at least 10 feet from the fueling area before restarting Fill unit from labeled fuel container only Never refuel while unit is running Wear eye protection Do not smoke of bring flame or sparks near fueling area Have fire extinguisher near by
Operation	Kickbacks Cuts Burns	 Maintain a safe distance between operator and other crewmembers Maintain a minimum of 100 feet between workers Never operate the cutting head above your knees Keep feet and hands away from the rotating cutting head Do not operate with one hand Always hold the unit with your fingers and thumbs encircling the handles
General	Lack of supervision, neglect	 Avoid touching muffler and gear shaft until the unit has time to cool When possible, personnel should not work alone; youth groups should have a minimum of 1 adult for every 5 youths. When volunteers are not directly supervised by FS personnel, at least one volunteer should carry a cell phone. One volunteer must be certified in First Aid and CPR.
Environmental Health Considerations	Sunburn, bees, ticks, mosquitos, lightning, etc.	 Use sunscreen when necessary. Use insect repellant, a 30% solution of Deet is recommended for adults and a 10% solution for youth. Watch for wasp nests or swarms of wasps when walking or working in field. Know if anyone in your group is allergic to bee stings. Carry a bee sting kit if you are allergic and instruct co-workers where it is and how to use it. Check for ticks after working in the woods Carry rain gear and layer clothing. Watch for obvious hazards like falling branches during windy conditions. During rain storms put down all tools, avoid grouping together and get away from water sources and power lines. Seek shelter as soon as possible. If no shelter is found, avoid ridges, hilltops, wide open spaces, ledges, rock outcrops, and shelter in exposed locations.
		 Remain constantly aware of the four basic factors that determine the degree of heat stress (Air temperature, humidity, air movement, and heat radiation) relative to the surrounding work environment heat load. Know the signs and symptoms of heat exhaustion, heat cramps and heat stroke. Heat Stroke in a true medical emergency requiring immediate

	Heat Stress	emergency response action.
		NOTE: The severity of the effects of a given environmental heat stress is decreased by reducing the work load, increasing the frequency and/or duration of rest periods, and by introducing measures which will protect volunteers from hot environments.
		 Tailor the work schedule to fit the climate, the physical condition of empoyees and the mission requirements. A reduction of work load markedly decreases total heat stress Lessen work load and/or duration of physical exertion the first days of heat exposure to allow gradual acclimatization. Alternate work and rest periods. More severe conditions may require longer rest periods and electrolyte fluid replacement.
		Terminate all work during periods of high winds due to snag hazards
		Although most common in the summer, thunder and lightning can occur anytime. If caught in a storm near a vehicle, return to the vehicle and stay inside while the storm in most active. Park vehicle in an open area away
	Wind	from trees. Turn off radios during the storm. Lightning is more likely to strike when radio transmision occurs. After the storm passes, turn forest radio on and check in with communications. If caught in a storm away from your
	Lightning	vehicle, try to find some form of building or shelter. DO NOT seek shelter under large trees or open areas. Stay off ridge tops and mountain tops. Seek shelter in low lying areas such as a ditch or cave. High winds can snap off snags and healthy trees unexpectedly.
Workplace	Violence or Threat of Violence	Violence occurs at different levels of intensity, and usually increases overtime. In order to prevent violence from escalating, volunteers and supervisors need to pay attention to the work environment, recognize the signs of possible violence early and take all necessary actions to reduce the risk to life and property. Violent people may come from inside or outside your organization. Call 911 for law enforcement if needed.
Correct Equipment -Proper Protective Equipment	Scrapes, blisters, bites, etc.	Wear long-sleeved shirts, long pants, leather gloves, and leather boots.
Lifting and Carrying Materials	Back strain, other injuries, etc.	Never bend over to use your back when lifting heavy objects. Stoop by bending your knees (keeping your back vertically straight) then secure the object and lift by straightening you legs. Know your limitations, use at least two people to lift heavy objects.
Walking along Roadways	Accidents, bodily injury, etc.	Be courteous as well as careful around vehicles when working on roadways. Do not work along roadways without orange vests and proper hazard abbatement measures in place.

O a who a war Di a lawar	Hamandana makani i	Missa latare also sella la attanza also se		
Garbage Pickup	Hazardous materials,	Wear latex gloves inside leather gloves.		
	Bio-hazardous waste	Be aware of suspicious or hazardous items.		
	etc.	Do not touch hazardous items and notify FS personel when they are found.		
		Do not work along roadways without orange vests and proper hazard		
		abatement measures in place.		
Emergency Evacuation Procedures	Illness/Injury	ALL Forest Service vehicles and volunteer groups shall have first aid kits. Each work crew or office group shall have at least one person currently certified to render first aid and CPR. If broken down on the highway, use radio or cell phone to initiate call for EMS/First Responders. At a facility with a telephone dial 911. Maintain communications with the 911 operator until help arrives. Render first aid to the sick or injured until relieved by a higher level medical responder. Do not abandon the patient. In remote work areas, it may be quicker to transport the injured person out to meet the EMS agency. Care shall be taken while moving and transporting the injured and communications must be maintained. Use Blood Borne Pathogen precautions. Notify your Forest Service Staff point of contact of the injury!! Complete necessary paperwork.

JHA Instructions (References-FSH 6709.11 and .12)

The JHA shall identify the location of the work project or activity, the name of employee(s) involved in the process, the date(s) of acknowledgment, and the name of the appropriate line officer approving the JHA. The line officer acknowledges that employees have read and understand the contents, have received the required training, and are qualified to perform the work project or activity.

Blocks 1, 2, 3, 4, 5, and 6: Self-explanatory.

- Block 7: Identify all tasks and procedures associated with the work project or activity that have potential to cause injury or illness to personnel and damage to property or material. Include emergency evacuation procedures (EEP).
- Block 8: Identify all known or suspect hazards associated with each respective task/procedure listed in block 7. For example:
 - a. Research past accidents/incidents.
 - b. Research the Health and Safety Code, FSH 6709.11 or other appropriate literature.
 - c. Discuss the work project/activity with participants.
 - d. Observe the work project/activity.
 - e. A combination of the above.
- Block 9: Identify appropriate actions to reduce or eliminate the hazards identified in block 8. Abatement measures listed below are in the order of the preferred abatement method:
 - Engineering Controls (the most desirable method of abatement).
 For example, ergonomically designed tools, equipment, and furniture.
 - b. Substitution. For example, switching to high flash point, non-toxic solvents.
 - c. Administrative Controls. For example, limiting exposure by reducing the work schedule; establishing appropriate procedures and practices.
 - d. PPE (least desirable method of abatement). For example, using hearing protection when working with or close to portable machines (chain saws, rock drills, and portable water pumps).
 - e. A combination of the above.
- Block 10: The JHA must be reviewed and approved by a line officer. Attach a copy of the JHA as justification for purchase orders when procuring PPE.

Blocks 11 and 12: Self-explanatory.

Emergency Evacuation Instructions (Reference FSH 6709.11)

Work supervisors and crew members are responsible for developing and discussing field emergency evacuation procedures (EEP) and alternatives in the event a person(s) becomes seriously ill or injured at the worksite.

Be prepared to provide the following information:

- a. Nature of the accident or injury (avoid using victim's name).
- b. Type of assistance needed, if any (ground, air, or water evacuation).
- Location of accident or injury, best access route into the worksite (road name/number), identifiable ground/air landmarks.
- d. Radio frequencies.
- e. Contact person.
- f. Local hazards to ground vehicles or aviation.
- g. Weather conditions (wind speed & direction, visibility, temperature).
- h. Topography.
- i. Number of individuals to be transported.
- j. Estimated weight of individuals for air/water evacuation.

The items listed above serve only as guidelines for the development of emergency evacuation procedures.

JHA and Emergency Evacuation Procedures Acknowledgment We, the undersigned work leader and crew members, acknowledge participation in the development of this JHA (as applicable) and accompanying emergency evacuation procedures. We have thoroughly discussed and understand the provisions of each of these documents:
